PONAR silesia	Power pack type UHMZ 12		WK 560 502
	p_{max}= 20 MPa	Q_{max} 2,5 cm³/rev	04.2008

APPLICATION

Power pack is intended to supply hydraulic system with hydraulic fluid (oil) according to the required parameters (pressure and displacement).

DESCRIPTION

Power pack in standard consists of the oil tank and the key accessories such as:

- drain breather filter used also as the oil filler
- oil level indicator (optical)
- oil drain plug
- magnetic plug

and of pumping unit (electric motor - gear pump), oil filter (low pressure filter), and also measuring block with pressure gauge switch, pressure gauge and output connections.

Standard version of the power pack can be extended (upon customer request) with:

- hydraulic control system – according to individual scheme;
- other equipment and hydraulic machines, which are not included in the data card, after prior consultation with the manufacturer
- electric control system

The extension of hydraulic system can be made:

- on the blocks for column mounting (**WK560 520**) – standard version
- on multi-station manifold blocks type **ULRA 6**... (**WK 450 499**)

Power pack is usually used for short - time operation. When the power pack is applied to continuous running under load, outside cooling system must be used.

TECHNICAL DATA (table1)

Nominal oil tank capacity	12 dm ^{3}		
Oil capacity difference corresponding to oil level difference max - min	up to 3,5 dm ^{3}		
Hydraulic fluid	mineral oil		
Operating temperature range	- 10 up to + 70 °C		
Standard filtration	16µm		
Viscosity	10 ÷ 380 mm ^{2}/s		
Motor supply voltage	230/400V 50Hz (other, if agreed)		
Type of pump	10C1X053G	10C1,6X053G	10C2,5X053G
Operating pressure	up to 20 MPa	up to 20 MPa	up to 20 MPa
Displacement	1cm ^{3}/revolution	1,6 cm ^{3}/revolution	2,5 cm ^{3}/revolution

ADDITIONAL

When selecting power pack to the machine it is necessary to consider its total heat balance by specifying oil temperature in the tank – it should not exceed 55°C (328 K).
If necessary, oil cooler must be used for the hydraulic system. Thermal power output of the power pack tank to the environment can be estimated using below formula or diagram.

$$N_{output} = k \times A \times \Delta T$$

N_{output} [W] - thermal power output of the tank
A [m^2] - active surface area of the tank for the power pack tank UHMZ 12 A = 0,45 m^2
k [$W/m^2 \times K$] - heat exchange factor
• k = 5 $W/m^2 \times K$ - when poor air circulation, unfavourable location,
• k = 10 $W/m^2 \times K$ - normal air circulation from all directions,
• k = 20 $W/m^2 \times K$ - when intensive air circulation (unnaturally forced),
ΔT [K] - temperature difference between the tank (oil) and the environment
